

PRECALL is a converged prepaid management system. It handles card management, billing and customer care for prepaid products of VoIP, GSM, CDMA, Broadband and 3G service providers. **PRECALL** enables the service providers to offer flexible pricing and billing plans for their Prepaid services. It allows service providers to manage Card generation, Card distribution, Card recharge and Billing that are necessary for revenue assurance in a prepaid business.

PRECALL is web enabled for Customer self care and Reseller care, and includes functionalities necessary for convergent billing such as planning of rates, customer information and usage analysis. **PRECALL** is pre-integrated with third party Authentication, Billing & CRM Server targeted at service providers, who use Cisco and other VoIP platforms to deliver voice and data services. A Cisco VoIP gateway and **PRECALL** is all you need to start a full-fledged telephony service, at an affordable price.
